ROTHE reels are injection moulded as single or sectional reels. Reels comprising sections may be delivered as ready welded or in sections, to save space. Final assembly will then be by clicking together on site.

Our polystyrene reels are available in various sizes and designs. Antistatic or conductive types are always possible on request. Standard ROTHE reels are available with flange diameters of 180 to 380 mm, traverse widths of 8 to 56 mm and in various materials.

Selection

Besides individual production we also offer a wide variety of standard reels that are permanently in stock. This means we are in a position to react flexibly and quickly to enquiries. Even for the smallest quantities.

Advice

Our many years of experience have paid off. We will work with you to find the ideal reel for your particular purpose. A team of highly qualified specialists will be at your side to advise you on any technical enquiries.

Individual production

Not an off-the-shelf product? We can offer a personalised reel design to order and will adjust both the packaging and the delivery quantity to your individual requirements.

Production / quality

All our products carry the quality seal MADE IN GERMANY and are the result of decades of experience in the manufacture of reels. Our high degree of automation enables efficient production and the resulting short reaction times.
